

## *SL11 Analog Knotmeter*

The **SIGNETMARINE** SL11 Knotmeter consists of a precision indicator and paddlewheel transducer to provide definitive speed indication for both racing and cruising yachts. The SL11 is capable of sensing and displaying variations in speed as low as 0.1 knot! The SL11 comes complete with all mounting hardware and your choice of through-hull fitting.

The SL11 Knotmeter is completely self-powered. This makes it ideal for smaller yachts with limited power supplies or as a backup unit for larger yachts. The transducer generates an AC signal which is read by the dampened meter movement. For night use red illumination is provided through a full 360-degree lens (12V power required.) For your convenience four different speed scales are available as no-cost options.

The SL11 Knotmeter was designed to provide you with many years of trouble-free service! Its transducer is compatible with **SIGNETMARINE** through-hulls dating back some 20 years, making it the perfect upgrade for your current knotmeter. Each unit is vigorously tested and must pass extensive quality control standards before it is shipped. All units come with a two-year warranty. For the name of you nearest **SIGNETMARINE** dealer call (310) 320-4349.

### *Specifications*

#### **Main Features**

Large, Easy-To-Read Dial  
0 - 12 Knot Scale Standard
