

## *SL254 Wind Indicator*

The **SIGNETMARINE** SL254 displays both wind speed and wind point information, making it an ideal instrument for both racers and cruisers alike. Digital wind speed is displayed in one-knot increments on the 2-digit Liquid Crystal Display (LCD). The analog pointer tracks apparent wind angle a full 360 degrees relative to your boat's direction. The SL254 is extremely easy to view, even in direct sunlight. 12-Volt red night-lighting provides crystal clear illumination from dusk to dawn.

The SL254 features advanced microprocessor-based technology which results in a low power drain to your boat's electrical system. This technology also ensures improved accuracy and reliability for the most demanding marine applications. The indicator may be mounted on a bulkhead, instrument panel, or instrument pod. The face is completely sealed to withstand weather, washdown, and corrosion. Matte-black finishing helps to minimize glare. The **SIGNETMARINE** SL254 is the most trouble-free instrument you will ever own! Each unit is vigorously tested and must pass extensive quality control standards before it is shipped. All units come with a two-year warranty. For the name of your nearest **SIGNETMARINE** dealer call (310) 320-4349.

### *Specifications*

#### **Main Features**

Large, Easy-To-Read Dial  
Hydraulically-Dampened Masthead Sensor  
00 - 99 Knot Wind Speed Scale  
360 Degree Range  
+/- One-Degree Accuracy  
+/- One-Knot Accuracy

#### **Mounting Options**

Sensor: Masthead Mounting Required  
Indicator: Bulkhead, Pod, or Panel Mounting

#### **Power Requirements**

Instrument: +12 VDC  
Lighting: +12 VDC
