

## *SL267A Digital Knotlog*

The **SIGNETMARINE** SL267A is a highly-accurate digital knotlog perfect for the offshore racer or the weekend cruiser. Its large, high-contrast LCD provides precise speed readings from 0.00 knots up to 75.00 knots. Because it reads out to two decimal places, the SL267A is ideal for trimming your sails. Its resettable log shows from 0.00 to 9999 nautical miles travelled.

The trend feature found on the SL267A may be used for accurate sail trim and for overall boat performance. Indicators on the LCD provide easy-to-read information on your boat's speed performance and are always on-line while in the normal viewing mode. By pressing the switch on the front of the instrument you may select the log mode, calibration mode, or adjust the speed averaging constant.

The SL267A has been designed using the latest technology available. Its transducer is compatible with **SIGNETMARINE** through-hulls dating back some 20 years, making it the perfect upgrade for your current analog knotlog. Each unit is vigorously tested and must pass extensive quality control standards before it is shipped. All units come with a two-year warranty. For the name of your nearest **SIGNETMARINE** dealer call (310) 320-4349.

### *Specifications*
